This course is organised for all physicians performing breast surgery: general surgeons, oncological surgeons and plastic surgeons. It presents different surgical techniques in breast cancer treatment including breast reconstruction and aesthetic surgery.

Three morning sessions including *live surgery* directly from the operating room and videos allow a good view of the surgical technical details. A continuous discussion among the surgeons and the participants in the auditorium is encouraged to get a better understanding of the techniques.

Several conference sessions in the afternoon present the main guidelines and indications in breast surgery.

Finally the course includes a special session entitled "complications and difficult cases" presented by the Faculty.
